

SENTRY Green

Protecting your Deposit and the Environment

Plastic products bearing this logo are biodegradable

- Today's disposable security bags pose unique challenges to our environment.
- Their adhesive security closures and other contaminants have always severely limited legitimate recycling options, thus requiring a different solution, one that doesn't further add to our overwhelming landfill problems.
- We have accepted this challenge and come up with a truly biodegradable option for your deposit and shipping bags.
- SENTRY Green bags are engineered to exhibit the same properties, shelf life and security you've come to rely on, and yet, when disposed of, are able to be metabolized into inert biomass by microorganisms commonly found everywhere on the planet.
- This biodegradation process can take place aerobically and anaerobically (landfills), even without the presence of light. These factors allow biodegradation in landfill conditions.
- **SENTRY Green is not photodegradable like other products, so shelf life and security are not impacted!** The bioactive compounds added to the plastic resins combine with heat, moisture and microorganisms found in the soil to metabolize the bag into inert humus that is harmless to the environment.

SENTRY Green, the environmentally responsible way to make your deposits.

your eco-friendly
deposit bag solution
